### **DETAILED ACTION**

This application contains claims directed to the following patentably distinct species:

(A) displaying a visual representation including a representation of at least a portion of composition including the specified amounts for a plurality of library elements corresponding to the plurality of experiments,

(B) displaying a visual representation including a representation of the mapping sequence, the maps in the mapping sequence being selectable in the visual representation.

The species are independent or distinct because they involve distinct elements and steps. For species (A), it is a representation of a portion of composition and for species (B), it is a representation of mapping sequences, which require distinct methods to display.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, (A) or (B) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-2, 6-11, and 16-22 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an

Art Unit: 1631

allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Because these species are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
